ABSTRACT:

PROBLEM TO BE SOLVED: To promote the safe spread of electronic settlement by using an electronic mail address and the bank card of a prepaid accounting card and guaranteeing delivery to an ordering person and payment to an ordering destination.

SOLUTION: The ordering person 1 attaches the bank card to which a payment money amount is inputted to the electronic mail of an order and sends it to the ordering destination 4 by a machine 2 and the ordering destination 4 confirms that it is guaranteed that the bank card from the ordering person 1 is provided with a balance more than the payment money amount and sends a product to the address or electronic mail address of the ordering person 1. Then, the ordering destination 4 sends the electronic mail of billing to an electronic settlement financial institution 5 by the machine 2, attaches the additional input of a billing money amount to the bank card from the ordering person 4 and sends it by the machine 2. Thus, the safe spread of the electronic settlement is promoted.
